📍 Gurugram, India (Open to Remote)

Professional Summary

Data Analyst with hands-on experience in end-to-end analytics — data cleaning, SQL querying, Python EDA, machine learning, and Power BI dashboard development. Delivered 3 portfolio projects on 100K+ row datasets across healthcare, banking, and retail domains, translating raw data into quantified business insights (revenue risk, churn drivers, readmission predictors) for non-technical stakeholders.

Technical Skills

- **Languages & Query:** SQL (MySQL, SQLite), Python (Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn), DAX
- **BI & Analytics Tools:** Microsoft Power BI, Power Query, Microsoft Excel (Pivot Tables, VLOOKUP, XLOOKUP, Conditional Formatting)
- **Analytics Concepts:** Data Cleaning, EDA, Feature Engineering, Classification Modelling, KPI Analysis, Business Intelligence
- **Tools & Platforms:** GitHub, VS Code, MySQL Workbench, Google Colab, Jupyter Notebook

Experience

Data Analytics Intern

Oct 2025 – Mar 2026

AAM Infotech Pvt. Ltd., Gurugram, India

- Delivered end-to-end data analysis on business datasets using SQL, Excel, and Power BI, supporting reporting pipelines used by 3+ departments for operational decision-making.
- Built 5+ interactive Power BI dashboards with KPIs, slicers, and drill-through reports, eliminating manual reporting effort and reducing stakeholder update turnaround time.

Projects

Hospital Readmission Prediction & Analysis

2025

Python, SQL, Excel, Power BI | [GitHub](#)

- Analyzed UCI Diabetes dataset (101,745 patients) end-to-end — performed Excel data audit, missing value treatment, and executed 8 business SQL queries on readmission rates by age, diagnosis, medications, and hospital stay.
- Designed an interactive Power BI dashboard with KPI cards, age-group breakdown, and diagnosis analysis to communicate findings to non-technical stakeholders.

Bank Customer Churn & Revenue Analysis

2025

Python, SQL, Excel, Power BI | [GitHub](#)

- Analyzed 10,000 bank customers across France, Spain, and Germany to identify churn drivers and quantify revenue at risk using SQL, Python, and Power BI.
- Built 8 SQL business queries, identifying Germany as the highest-churn market (32.44%) and the 51–60 age group as the highest-risk segment (56.21% churn rate).
- Identified a critical product insight: customers holding 4 products churned at 100% vs. 7.58% for 2-product customers — recommended a targeted cross-sell strategy to reduce high-risk product bundling.

Education

Bachelor of Computer Applications (BCA)

2025

ISBM University, India

- CGPA: 8.2/10 | Relevant coursework: DBMS, Data Structures, Python Programming, Software Engineering

Certifications

- **Data Analytics Certification**, Ducat School of AI — Completed an 8-month structured program covering SQL, Power BI, Excel, DAX, and data modeling, culminating in end-to-end analytics projects (May 2025 – Jan 2026).
- **Data Analytics Job Simulation**, Deloitte Australia (via Forage) — Completed practical tasks simulating real analyst work: data modeling, analysis, visualization, and spreadsheet skills (2025).
